Experience

EvoDoc

Full Stack Intern

May 2026 - Present

- Contributing to the development of **hospital management and clinical information systems**, building digital workflows across **OPD, patient management, clinical operations, and hospital administration**.
- Developing full-stack features for production healthcare applications, working across **Next.js, React, TypeScript, Supabase, APIs, and database workflows** to translate hospital processes into scalable software.

Founders Club

Technical Lead

Mar 2025 - Present

- Led the technical direction of a **multi-project engineering team**, overseeing architecture, code reviews, development standards, Git workflows, and production delivery across the club's software ecosystem.
- Mentored developers across teams, resolving technical blockers and guiding engineers through **full-stack development, code quality, and scalable engineering practices**.

Projects

Cross-Cutting

2026

- Built an in-house **HealthTech platform for SRM Hospital** using **Next.js, React, TypeScript, Clerk, and Supabase**, enabling clinicians to manage patients and conduct structured digital assessments.
- Engineered end-to-end clinical workflows for **DSM-5 mental-health screening and decision-capacity assessment**, including scoring logic, session tracking, clinical notes, authenticated dashboards, and backend APIs.
- Designed reusable assessment flows with **branching clinical logic, persistent session state, form versioning, and secure doctor-specific data access** to support reliable digital clinical workflows.

DBGuree

2026

- Built a desktop **AI-powered SQL workbench** that translates natural-language queries into executable SQL using **Electron, Python/FastAPI, LangChain, and Qwen2.5-Coder**.
- Engineered a **schema-aware RAG pipeline** with **ChromaDB, llama.cpp, and SQLAlchemy** for contextual SQL generation and local LLM inference across multiple database engines.
- Implemented **SQL parsing and validation, persistent query history, and secure credential management**, supporting PostgreSQL, MySQL/MariaDB, and Microsoft SQL Server.

x86-64CNN

2026

- Implemented a **Convolutional Neural Network from scratch in x86-64 Assembly (NASM)** on Linux for MNIST inference, without relying on high-level ML frameworks.
- Optimized CNN computation using **AVX2/FMA SIMD instructions**, custom memory management, and matrix multiplication while implementing core operations including convolution, ReLU, pooling, and dense layers.
- Built low-level inference infrastructure with **custom memory allocation, optimized numerical kernels, and modular assembly interfaces**, demonstrating systems-level ML implementation and performance optimization.

Education

SRM Institute of Science and Technology, Chennai

B. Tech in Computer Science Engineering (Cybersecurity)

Aug 2024 - May 2028

Sri Chaitanya Techno School

PCMC (CBSE 12th)

Jul 2022 - Mar 2024

Skills

Languages: Python, Java, C++, JavaScript, TypeScript, SQL

Web Development: React.js, Next.js, Node.js, Express.js, REST APIs, Tailwind CSS

AI / ML: Machine Learning, Generative AI, LLMs, RAG, LangChain, CNNs, Scikit-learn

Cybersecurity & Systems: Web Security, OWASP, API Security, Linux, Docker, Git/GitHub, x86-64 Assembly

Certifications

Artificial Intelligence Fundamentals – IBM SkillsBuild

Jul 2025

Introduction to Critical Infrastructure Protection (ICIP) – OPSWAT Academy

Jun 2025
